

Takeda Brings Clinical Data to Life for AI

Hear from leaders at Takeda about modernizing their cloud data foundation on Informatica and AWS for trusted information-sharing and unified cloud data integration.

Breakthrough Wins

of data moved to the cloud

higher data productivity

saved in IT overhead

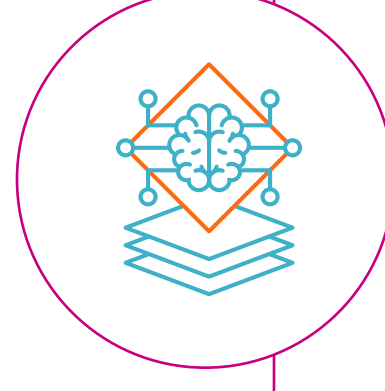

The Master Plan

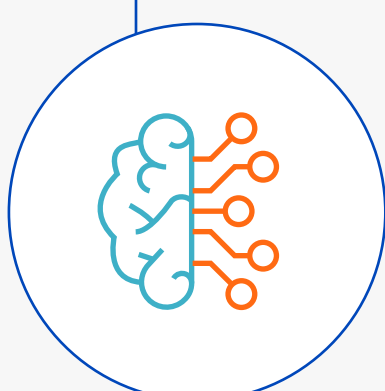

Barbara Latulippe, Chief Data Officer at Takeda, walks you through the company's data transformation journey and achievements.

Speed up therapy development with AI

"As a biopharmaceutical company, we're literally in the business of bringing data to life. To get therapies to our patients as quickly as possible, that means a focus on access, governance, quality and trust so our data is AI-ready."

Elevate patient care with smart technology

"It's a really exciting time in pharma, with AI and generative AI coming onto the healthcare scene. We all know clinical trials have a long development time. The more we can leverage data and technology, the faster we can get new therapies to our patients and drive positive change in their lives."

Boost productivity and cost savings with the cloud

"With data volumes growing 20% each year, we needed the strategy of a cloud-first, AI-driven infrastructure as a service that can be optimized across the company. Modernizing our infrastructure in the cloud allows us to leverage greater performance and scalability. We can simplify our tech stack and improve the user experience while driving cost efficiencies."

Enhance the experience with AI-powered solutions

"Most important to me is the business experience, and I think that's key to the power of Informatica Intelligent Data Management Cloud™ (IDMC). It keeps all data management activities under one platform and offers a truly seamless experience. Then, you layer on data lineage and data quality, and teams have everything they need to ensure data is explainable, discoverable and used responsibly for any AI use case."

Sharpen data strategies with the right partners

"Informatica has been an incredibly strong partner on our journey to the cloud. Professional services stepped in and really acted as one team to co-design a plan with us. The account management team has been great at helping us really refine the strategy and be more thought-provoking. And the product team has been very engaged in listening to us about future product enhancements."

Power Duo: Informatica and AWS

By modernizing its cloud data foundation with Informatica and AWS, Takeda achieved trusted information sharing and unified cloud data integration. A long-time Informatica customer, the company also shifted 11,000 job mappings from PowerCenter® Cloud Edition to IDMC, moving 96% of its data to the cloud in 18 months.

Sudeep Regmi, Head of Data Management and Innovation at Takeda, reflects on his experience collaborating with Informatica and AWS.

Deliver high-quality data with a strong data backbone

"Informatica and AWS form our enterprise data backbone. Both platforms complement each other, working together perfectly from data ingestion to moving data across different storage layers, helping us make high-quality data available to the business with less manual work."

Simplify operations with world-class data architecture

"IDMC helps us bring all the data management capabilities together in the best data architecture you can imagine. Rather than juggling multiple data products and siloed tasks, IDMC gives you a single plane to visualize all the work across any cloud or platform, from data sourcing and quality to consumption."

Get your data ready for AI with Informatica and AWS.
